Meet the Author – DANIEL FRIEDMANN

Daniel Friedmann P.Eng., M.A.Sc., a Readers' Favorite 2013 International Book Award Winner, studies the origin of the universe and life on earth from both the scientific and biblical perspectives. His work on reconciling the biblical account with scientific observation utilizing his biblical clock formula has been reported in conferences, various newspapers, magazines, television and radio talk shows.

He is Chairman of Carbon Engineering, a company dedicated to removing co2 from the air to solve climate change. He was the President and CEO of a global communications and information company until May 2016. He holds a master's degree in engineering physics and has published more than 20 peer-reviewed scientific papers on space industry topics and cosmology. He is also a longtime student of religion and for the past 15 years has attended the Vancouver Kollel center for learning.

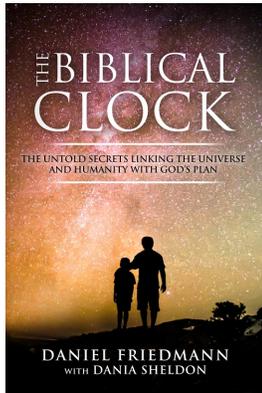

Daniel Friedmann's first book, *The Genesis One Code*, demonstrates an alignment between key events and times as described in the creation narrative in the book of Genesis with those derived from scientific theory and observation. His second book, *The Broken Gift: Harmonizing the Biblical and scientific accounts of human origins* demonstrates an alignment between the key events and timeline recounting the appearance of humans in the book of Genesis with those derived from the fossil record and genetic studies. His third book, *Roadmap To The End Of Days: Demystifying Biblical Eschatology To Explain The Past, The Secret To The Apocalypse And The End Of The World*, was published February 2017. Friedmann was born in Chile and raised in Canada. The latest book, *The Biblical Clock*, co-authored with Dania Sheldon, is a narrative describing Friedmann's quest for answers that produced the prior three books. It is a stand-alone volume and in relating the story of discovery covers the essential materials in the earlier trilogy.

About the Book– The Biblical Clock

"Whether the reader enters this discussion from the purely religious side or from the purely scientific/secular side, the one (of many) points that Friedmann and Sheldon make is that there is no reason for combative separatism. Their honesty and humility are most welcome, no matter the preconceived notions of the reader.

Food for thought and for discussion during a period in our history when aspects of the origins debate and the Apocalypse seem to dominate."
Grady Harp, Hall of Fame/Top 100 Reviewer, Amazon

Science and religion have two seemingly opposing views of the universe's biggest questions.

But what if the real story told you they were both right?

Vancouver, 2009. Physics engineer and CEO Daniel Friedmann loves solving problems. When the avid scientist dives deep into scripture, he's faced with questions he feels compelled to answer: Is it possible to harmonize the scientific timeline for the development of the universe with the biblical timeline described in Genesis 1? How do the evolution of human history and prophecies surrounding the End of Days fit in? His quest for answers takes him and his nephew Seb on an incredible journey through the ages, discovering the lives and works of mystics, prophets, sages, philosophers, scientists and biblical commentators. Follow Dan and Seb as they discover answers to some of the biggest questions in science and religion today, including:

- Does the six-day creation account actually link with science's 13.8 billion-year timeline?
- How do world history, Genesis, and the End of Days fit within the context of God's Plan in heaven?
- How can the appearance of life on Earth, as depicted by the fossil record, match the sequence and timing of life on Earth described in Genesis 1?
- Do Genesis and the evolution of human history reveal the events and timing for the End of Days?
- Are there texts predating modern science that describe the Big Bang and contain the scientifically calculated age of the universe?
- And finally, is there a secret harmony resolving the creation-versus-evolution debate?

About the Book— The Broken Gift

"I value a clear presentation of the Creation Narrative when given by a person who understands modern science, has a high view of Biblical Inspiration, a deep understanding of one of the major theological traditions — and sees no contradiction between these things. The Broken Gift is such a book, and I treasure it for its clarity and readability."

Dr. David C. Bossard, Ph.D in mathematics, M.Div. from Biblical Theological [Seminary](#)

Was Adam the first man? Was man created by divine act in less than one day almost 6,000 years ago, as the Bible suggests?

Or did man appear 200,000 years ago as the culmination of numerous human-like species that existed during a span of millions of years, as the scientific record shows?

Both cannot be right. Or can they?

Imagine there exist manuscripts, written centuries ago, that could help us objectively decipher Genesis and thereby extract the timeline and key events recounting the appearance and early history of our species, Homo sapiens, precisely as identified by the latest scientific evidence derived from the fossil record and genetic studies.

The Broken Gift carefully examines the relationship between scientific theory and biblical teachings. The book approaches the human origins debate from a fresh perspective informed by both scientific and scriptural research. The book demonstrates alignment between key events and their dates relating to the appearance and early history of our species as described in Genesis chapters 1 through 11 (Adam, Adam's descendants, the Flood, and the fall of Babel) with those derived from scientific observation.

Could both be true? Is the evidence solid or is it sophistry? You'll have to be the judge.

About the Book– ROADMAP TO THE END OF DAYS

"Can cosmological time be aligned with biblical time? Is there a pattern leading up to the End of Days? In this epic undertaking, Friedmann cuts a clear path for the reader interested in life's biggest questions."
- **Jane Macdougall**,
*nationalpost.com/macdouga
ll, @janemactweet*

Is history a purposeful process with a beginning and an end, or is it a random series of events with neither purpose nor direction? If history is a guided process, are we near the end of the world?

Have we almost completed preparations for the End of Days? What will happen next? When? Are we backseat passengers in this journey, or are we in the driver's seat?

Daniel Friedmann takes you on a journey to discover what is really going on with Biblical eschatology and the end of the world, and to then glimpse the future and ponder the role you will play in it.

History is a discipline that uses a narrative to examine and analyze a sequence of past events and to objectively postulate the patterns of cause and effect that determined them. Friedmann looks at history from the supernatural perspective. Every plan becomes suddenly evident when enough of it has played out. Have we reached the point in history where the Divine Plan of history is apparent?

Read Roadmap to the End of Days and discover what is really going on, then glimpse the future and ponder the role you will play.

In this book:

- Friedmann places world history within the context of the Divine Plan, allowing listeners to understand recent past and what is in store for the future.
- Learn about the Divine Plan structure in order to examine biblical history from a different perspective, with amazing accuracy. Why other experts who interpret the End of Days by deciphering prophecy alone may have it all wrong.
- Put the End of Days into context by examining parallel periods of history that have already occurred.
- Examining the revelations in scripture coherently and in sequence using the Divine Plan.
- Learn how the cosmic placement of events, both historical and present, reveals a pattern of the future.
- A bird's-eye view of where we have been and where we might go in order to bring us to a new level of understanding and a further questioning of our human origins, purpose, destiny, and ability to alter the path to the future.

About the Book– The Genesis One Code

"The centuries old rivalry between science and religion has left both sides attempting to boast the knowledge of the creation of earth and life, and prove one theory right while effectively disproving the other.

Readers with a knowledge-craving, open mind will thoroughly enjoy this read and be delighted by its many elements and propositions."

Night Owl Reviews

Were the heavens and the earth created 6,000 years ago, as the Bible suggests?

Or did the universe expand into existence nearly 14 billion years ago from a spontaneous "Big Bang"?

Both dates cannot be right. Or can they?

Imagine medieval manuscripts, written some 800 years ago, that could help us decipher Genesis and thereby pinpoint exactly when the universe began – an instant squaring, moreover, with our most up-to-date cosmological theories. Further, suppose these same manuscripts could help us extract from Genesis unequivocal timelines for the development of life on Earth, again precisely as identified by the latest scientific evidence derived from the fossil record.

The Genesis One Code carefully examines the relationship between scientific theory and biblical teachings. The book approaches the origins debate from a fresh perspective informed by both scientific and spiritual research. The book demonstrates an alignment between the dates of key events as described in Genesis 1 and 2 with those derived from scientific theory and observation. This alignment provides a compelling perspective deserving of thoughtful consideration.

Reviews

by Daniel Friedmann

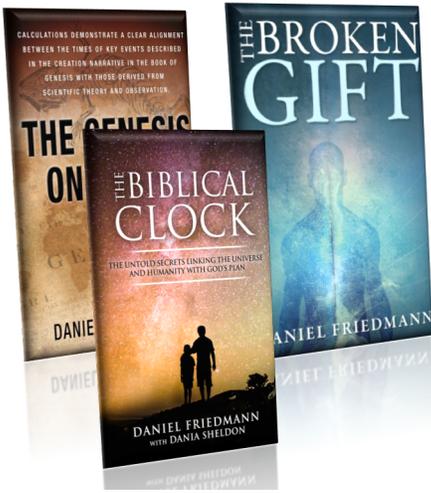

“Having read all four books of the INSPIRED STUDIES this reader felt it was helpful to review the credentials of author Daniel Friedmann, and that bears repeating: ‘Daniel Friedmann is a student of the origin of the universe and life on earth both from the scientific and biblical perspectives. As author of *The Genesis One Code*, he demonstrates an alignment between the times of key events described in the creation narrative in the book of Genesis with those derived from scientific theory and observation. He is currently writing a second book entitled *Adam and the Homo sapiens* which will demonstrate an alignment between the key events and timeline recounting the appearance of humans in the book of Genesis with those derived from the fossil record and genetic studies. Born in Chile and raised in Canada, he is currently CEO of Canada's leading aerospace company that built the Canadarms, and is involved in space exploration and the Hubble telescope. He is a professional engineer and holds a master's degree in engineering physics. He has 30 years' experience in the space industry, having worked on projects in fifteen countries while throughout the decades conducting extensive scientific research. He has published more than 20 peer-reviewed scientific papers on space industry topics and cosmology. He is also a longtime student of religion and for the past 14 years has attended the Vancouver Kollel center for learning. His work on reconciling the biblical account with scientific observation utilizing his biblical clock formula has been reported in various newspapers, magazines and radio talk shows. He is passionate about helping young adults put science and the Bible in correct context.’

Now in Book 4 Daniel, with co-author Dania Sheldon, further investigates the arena of the always puzzling dilemma of the true creation of the world – both the biblical version and the scientific version – and now the explanation seems even more satisfying because of his technique of creating a dialogue between an adult (Daniel) and a child (his nephew Seb). Adding photographs and artwork enhance the discussion, and by placing the questions we all have in this sensitive and accessible manner, the concept Dan presents is even more credible. This is a highly successful series and worth of everyone’s attention.” *Grady Harp, Amazon Top 100 Reviewer*

"Daniel Friedman's book, *Roadmap to the End of Days*, is very insightful using the past and present narratives and sources in the Torah - Bible as a guide, the Universal Noahide Code (UNC), a means to bring about personal and global redemption to all people. As it says in the End of Days, the whole world will worship the one and only G-D, may we see the Messianic Era today."

- **Rabbi Yakov D. Cohen, television host of 'One People One World under G-D', and founder and director of the Institute of Noahide Code, a UN NGO, Noahide.org**

Reviews

by Daniel Friedmann

“I value a clear presentation of the Creation Narrative when given by a person who understands modern science, has a high view of Biblical Inspiration, a deep understanding of one of the major theological traditions — and sees no contradiction between these things. The Broken Gift is such a book, and I treasure it for its clarity and readability.”

Dr. David C. Bossard, Ph.D in mathematics, M.Div. from Biblical Theological Seminary

“Although I did not agree with all of the author’s premises in this book, I did appreciate the wonderful detail and specific information that is contained within. The theory of time being divergently different in space, depending on the place an object is located, brings great possibilities to our understanding of how six days of creation can be reconciled with 13.7 Billions years as the age of the universe.

On a personal note: I think that in time we will have a much greater understanding of the Genesis account in terms of space-time.

“A wonderful blending of science and spirituality! Daniel Friedmann’s newest book The Broken Gift is an eye-opener for both staunch scientists and orthodox religious folks. Being of the latter, it solidifies my faith even more. Worth reading at least twice!” **Planet Weidknecht**

“Not content with taking on the challenge to reconcile the “irreconcilable” in the Genesis Code, Friedmann continues his journey in his second book “The Broken Gift”. Where else would you find someone working on reconciliation between scientific timelines and biblical records in the pursuit of a fuller truth? The author deserves praise for his painstaking attention to detail in both areas and may just show us the way to address the current split between science and religion.” **H. B. PhD Psychology, BSc Physics**

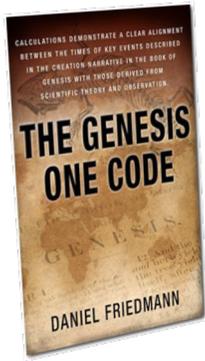

“Was Adam the first man? Was man created by divine act in less than one day almost 6,000 years ago, as the Bible suggests?

Or did man appear 200,000 years ago as the culmination of numerous human-like species that existed during a span of millions of years, as the scientific record shows?

Both cannot be right. Or can they? This is many of the questions Friedman discusses in his book The Broken Gift. This book takes you through a scientific journey of human creation and scientific evaluation. My honest opinion is that this would be a great book for anyone studying theology or wrestling with the question of moral decisions, sin processes, or the overall transition from the Garden of Eden to today’s time. If you have an analytic mind then this book is for you.”

Reviews

by Daniel Friedmann

“Reading The Genesis One Code is a faith affirming adventure! Daniel Friedmann has done an insightful and entertaining presentation of the meaning of the first chapter of Genesis. Not since the Protestant Evangelical Dr. Hugh Ross of Reasons to Believe came out with his support of the ‘Big Bang’ theory, the creation day interpreted as an age, and ‘old earth’ arguments have I felt that ‘more light has been given to our generation’ regarding the debates concerning creation. For far too long many faith communities have been living in fear that science will somehow disprove God and God’s role as Creator. Those of us who have been involved in some aspect of science and engineering knew this would never be the case. However we had to contend with faith communities that presented a narrow creation interpretation that seemed at odds with the universe we observe. I think most scientist-engineers of faith realized there had to be a method, an interpretation that would reconcile the evolutionary model with the days of creation.

Why is this important? Because, for so many, the creation debate acts as a stumbling block to belief. As believers we should be seeking ways NOT to defend our faith (God can handle that job), but to assist in removing the stumbling blocks of our own making. And as an attempt for inclusion of those who are already believers, yet define themselves as Theistic or Guided Evolutionists and often find themselves alienated from their own faith communities over this debate. What a sad state of affairs when the great conversations of life are not permitted in our own worship communities. I think we always walk on dangerous soil when we have to prove our faith, yet it is affirming to be able to present the ideas in Mr. Friedmann’s The Genesis One Code as a viable option. I for one am fascinated and highly recommend the reading and re-reading of this text.” **Pastor Jim Allen, Pastor at Shabbona United Church of Christ**

“The Genesis One Code, will definitely cause any serious student of Science and the Bible to ponder deeper the vastness of Creation and our physical universe!

Daniel Friedmann has succeeded in presenting a valid case for the congruence of the Biblical record of Creation with Modern Science. His scholarly research coupled with his Mathematical calculations; is quite intriguing and thought provoking. His ability to take complex terms and concepts communicating them in a relevant way is remarkable for any standard. Having said that, It was an intellectual delight to read this book!” **Rev. Giulio Lorefice Gabeli, Senior Pastor, Westwood Community Church**

I learned a great deal from reading this book The Genesis One Code and found it to be exceptionally well written and for the most part, easy to understand. Despite many of the technical terminology.”

Book Excerpt The Biblical Clock

CHAPTER 1: FROM Acre to Angels Acre, 1291, to Spain, 1305

On the evening of Thursday, May 17, 1291, Isaac ben Samuel carefully put away several manuscripts and his writing implements, extinguished the candles on his desk, and lay down, still fully clothed, for what would be a last, uneasy sleep in Crusader held Acre . The rumbling and crashes of the catapults had ceased some two hours earlier, and as the city of about 35,000 souls withdrew indoors with the onset of dusk, the sounds of its walls crumbling were painfully audible.

The siege of Acre by Al-Ashraf Khalil of the Bahriyya Mamluks had continued for forty-two days, and Isaac ben Samuel felt the city's fall was imminent. Some of his rabbinical colleagues opined that the siege would last forty-nine days, at which time a divinely sent disaster would befall the Muslims and the city would be delivered.

Isaac was a man of deep faith and already well advanced in deciphering the mysteries of scripture, but he wasn't a fool. Such a miracle might occur—or it might not, in which case he had to be prepared to flee what would certainly be the ensuing massacre. He had packed his most valued manuscripts, both his own writings and those of others, in a large satchel that was not so bulky or heavy as to prevent him from running through narrow streets.

Many of the city's Jews had taken to spending most of their time in the synagogues, and Isaac's close friend Jacob had urged him to come to the one in their neighborhood. Jacob and about 500 others would be staying there overnight, as their homes were close to the city walls and they sought the comfort of distance and numbers. Isaac had agreed to join them at first light to pray and then discuss what they would do if the city fell. "When, not if," he muttered as he drifted into a shallow sleep.

He was jolted awake before dawn by thundering drums. Not close by, yet so loud that they seemed to fill the air. As he opened the shutters, the booming broke over him like an invisible wave. It had begun: the Mamluks' final assault.

Isaac hurriedly gulped down a large cup of water, grabbed his satchel, and headed out into the street, toward the synagogue, a mile distant. A few hundred yards from his destination, he began to hear screams and smelled burning timber. In less than a minute, black-gray billows were tainting the rosy dawn sky. He broke into a jog, rounded a corner that led to the square surrounding the synagogue, then nearly fell in his haste to stop and retreat into a shallow alcove. Mamluk soldiers had already made it to the square, and the stony ground had begun to steam with freshly shed blood. The buildings bordering the square were ablaze.

Page 12

Book Excerpt The Biblical Clock

CHAPTER 1: FROM Acre to Angels Acre, 1291, to Spain, 1305

Most of the synagogue's occupants who had ventured out at the sound of the drums had been prevented from reentering when the Muslim fighters streamed into the adjacent streets. Those who remained inside—mostly women, children, and the very elderly—swiftly found themselves barricaded within their erstwhile sanctuary. Knowing he should flee, Isaac nonetheless remained fixed in mute horror as the soldiers set the synagogue alight in several places, pouring on oil to encourage the flames. The shrieks and stench were appalling, and years later, writing of that day, he still flinched in remembrance of the man-devouring inferno and could hear, smell, and taste it all again.

Within three hours, the city was completely overrun and the Mamluks claimed victory over Acre. Every Christian found was slaughtered, and most Jews as well. The city was razed so thoroughly that thirty years later, a Syrian geographer who had visited Acre wrote that it was still largely in ruins.

We don't know what distinguished Isaac as someone to be spared, but he was. It may have been that as a well-educated man, he was regarded as having potential value. We know that he was taken prisoner and eventually ransomed, although when or by whom remains unclear, so he did prove to be more useful to the Mamluks alive than dead.

For a century, Acre had been in Crusader hands. Although factional disputes had broken out among them during that time, leading to the occasional civil war, Acre had thrived, becoming a prosperous commercial center in the Eastern Mediterranean region. It was also strategically important as a heavily fortified gateway to the Holy Lands and was accordingly well maintained. By the time of the siege, it was the Crusaders' last major stronghold in their Kingdom of Jerusalem, so its fall to the Muslims, and their ensuing near-obliteration of its structures and inhabitants, put an end to any further crusades to the Levant. The city's contemporary prominence meant that numerous accounts of its annihilation survive.

Author Interview Q & A The Biblical Clock

1. Provide me with 3 Key Message Points of the book:

Science and religion-based knowledge is not at odds.
Combining both bodies of knowledge, we can get a better understanding.
We can estimate the timing of future events from the cosmic plan and actual history.

2. What do you think will surprise readers the most?

That the timeline for the development of the universe as detailed by science and as contained in the Bible, match; and that the Bible says science will be able to understand everything that happened in the development of the universe except one thing: the beginning. The instant before the Big Bang theory begins to work.

3. What is your best advice for beginning writers?

Try this book first. According to reviewers, it's an easy narrative to follow type of book.

4. How long did it take to do the research, write the book, and have it published?

This book includes research from my 3 prior books. In total 10 years of work. It took about eight months to write and a year to publish as it went to many reviewers for feedback and had many revisions before publication

5. Who is the audience for this book, primarily?

It's for a general audience. Anybody with an interest, no prior scientific or biblical training required.

6. Why would any scientist need to consider biblical sources to answer the creation of the universe and the human origins question? Aren't we certain we evolved?

As science has studied our origins, we have understood much of what happened but at the same time some questions have remained unanswered and, in some cases, deepened in mystery. Today, some scientists are concerned that maybe we can't get at all the answers. The Bible explains that science will be able to obtain all answers except just 3. Those three remain the biggest unanswered questions today. Yet the Bible has lots to say about them.

Contact Information:
Daniel Friedmann
<http://danielfriedmannbooks.ca/>
Page 14

Author Interview Q & A The Biblical Clock

7. How does Genesis 1 and the evolution of human history reveal the events and timing for the End of Days?

In short, the Bible contains the structure of the Divine plan for history. We have experienced and documented 1000's of years of history. When we place actual historical events on the Divine structure, a pattern immediately emerges. Once we know the pattern, we can make sense of the prophetic writings and glimpse at what's next.

Is the End of Days soon? Yes, it's a process that will take time but should begin to be totally obvious in the next 20 to 30 years. Today, with the aid of this book, one can see the early events already.

8. Why would any believer read this book?

Because many believers are aware that science seems incompatible with the Bible. Yet they are also well aware that science works. So, they need to see and understand that there is no incompatibility. Also, science and history shed much light on the Bible itself.

9. Why would any nonbeliever read this book?

Because they may be aware that some questions are not being answered by science and certainly the future is uncertain. This book sheds light on these topics.

10. How can one even compare religion and science on this issue? They come from very different points of view.

The views are not that different. Science tries to understand what we have and how it came about. Like looking at a house and seeing what's its built of and how it might have been built. Religion claims to have the Creator's notes; like the architectural blueprint. Now, to the unaided eye, the blueprint does not look anything like the house but with some training it does tell about the house. The same is true in comparing science and biblical texts.

11. How does this book affect other religions?

The book is based primarily on Genesis and some other books of the Bible. All of these are shared with Christianity and most with Islam. For non-Abrahamic religions, the book shows and approaches the issues but does not go into their scriptures.
